Ha Dong, Ha Noi

EDUCATION

Bachelor of Engineering in Information Technology

2019 - 2024

Thuyloi University

- **Status:** Graduated

TECHNICAL SKILLS

Languages: C# (Expert), JavaScript, Python, C++ (Reading proficiency).

Tools: Git, GitHub, SourceTree, ClickUp.

Product Planning: Experienced in **product development planning**, from conceptualizing mechanics to defining development milestones.

Game Development: Unity (3D), WebGL, Mobile Optimization, VFX/UI Integration.

VFX & Audio: Proficient in creating immersive experiences using **VFX, SFX, and Particle Systems** within Unity.

PROFESSIONAL SUMMARY

With a mindset of continuous learning and a proactive approach to challenges, I am committed to delivering high-quality products while optimizing development time and workflows to provide maximum value to the company. My goal over the next 2 years is to become a trusted **Senior Developer** and a **Key Member** within the organization.

WORK EXPERIENCE

Freelance | Unity Game Developer **October 2024 - Present**

Developer

- **AI-Driven Development:** Leveraged Generative AI tools to accelerate asset creation and code prototyping, reducing overall project development time by 30% for various Casual game titles.
- **Architectural Efficiency:** Applied a combination of **Design Patterns** (Factory, Command, and State) to build a highly flexible framework, enabling rapid deployment of new game mechanics.
- **Performance Optimization**: Executed rigorous code refactoring, reduced Draw Calls, and managed memory to maintain a stable 60 FPS on various mobile hardware.

Genify Global *7/2023 - 9/2025*

Unity Developer

- **Architecture & Development:** Spearheaded the development of core gameplay systems using C# and OOP, ensuring high modularity and code reusability.
- **Design Patterns Implementation:** Applied Singleton for global managers (Audio, Game State) and the Observer Pattern for event-driven systems (UI updates, Game Events).
- **Performance Optimization**: Executed rigorous code refactoring, reduced Draw Calls, and managed memory to maintain a stable 60 FPS on various mobile hardware.
- **R&D (Telegram Mini-games):** Researched and implemented Telegram API within Unity WebGL to handle user authentication and cloud data synchronization.

PROJECTS

Client Developer **10/2024 - 9/2025**

Telegram Mini-Game: Dino Race

- **Technologies:** Unity WebGL, Telegram Bot API, JSON.
- **Gameplay:** A competitive racing game integrated directly into the Telegram Mini-App interface. Players upgrade character stats, collect specialized items to outpace opponents in real-time races.

Core Principles: Strong foundation in **OOP** and strictly adhering to **SOLID** principles to ensure scalable and maintainable code.

English: Technical Reading & Writing (Standard documentation).

Software Architecture: Expert in **OOP** principles and strictly adhering to **SOLID** for scalable code. Proficient in applying **Design Patterns** such as **Singleton, Observer and State** to solve complex development challenges.

INTERESTS

- **Tech Hobbies:** 3D Printing
- **Gaming:** Researching core mechanics and trends in the Casual/Puzzle genre.

- **Key Achievement:** Engineered a robust **Client-Server synchronization** system using **Firebase**, ensuring player stats and assets are updated accurately in real-time.
- **Link: https://t.me/dinorace**

Main Developer **7/2024 - 10/2024**

Sausage Jump: Flip N Tap

- **Technologies:** Unity, Physics Engine, C#.
- **Gameplay:** Players control a character to reach the destination by tapping the screen to flip and jump, navigating through various obstacles and traps.
- **Key Achievement:** Managed the entire development lifecycle, implementing a **Singleton-based Game Manager** to centralize score tracking and game states.
- **Link:** https://appmagic.rocks/google-play/sausage-jump-flip-n-tap/com.genify.sausage.jump.flip.tap

Main Developer **11/2023 - 2/2024**

Traffic Jam Game: Car Parking

- **Technologies:** Unity, Grid-based Logic.
- **Gameplay:** A puzzle game where players click on cars to navigate them into garages; the goal is to clear all cars within a limited number of moves.
- **Key Achievement:** Developed custom pathfinding and grid movement logic, ensuring precise car navigation within move-limit constraints.
- **Link show case:** https://www.youtube.com/watch?v=j5zfArlxN40

Main Developer **3/2024 - 7/2024**

Robbery

- **Technologies:** Unity, NavMesh, AI Logic.
- **Gameplay:** A stealth-action game where players infiltrate houses to steal items while avoiding detection; loot is used for character skill upgrades.
- **Key Achievement:** Leveraged **Inheritance and Polymorphism** to build an extensible NPC AI system, allowing for modular character upgrades and varied enemy behaviors.
